Collagen Hyaluron

FLEECE MASK FOR DRY SKIN

Ideal for dry skin lacking in moisture – fast and effective.

When hyaluronic acid meets high-purity collagen, the result is the best basis for moisturizing dry skin and giving it a smooth, radiant appearance.

Hyaluronic acid and collagen have been used as active ingredients in cosmetic applications for decades. And with good reason; both are prized as excellent moisturizers and skin-firming agents.

Hyaluronic acid is a polysaccharide found naturally in the skin, where it supports the structural proteins collagen and elastin, binds water and lends the skin elasticity and suppleness. The fascinating thing about hyaluronic acid is that it can store huge quantities of water, soaking it up like a sponge and growing to many times its original size. This allows it to plump up the intercellular tissue from the inside. With increasing age, however, the skin's stores of hyaluronic acid decrease – the skin becomes less elastic and dries out, and wrinkles and fine lines form.

DERMAFLEECE Collagen Hyaluron counteracts the moisture deficiency of dry skin. This intense moisturizer and wrinkle filler instantly smooths and plumps up the skin. The skin-smoothing effect is visible and noticeable to the touch after as little as one application. Dryness lines are visibly reduced, and the skin takes on a firmer, more toned and fresher appearance.

Application

Cleanse the area of the skin to be treated, apply an active concentrate, and ensure that the skin is oil-free. Place Collagen Hyaluron on the skin and moisten, preferably with Mask Activator. Leave on for approximately 20 to 30 minutes to take effect, then remove the mask in one piece. Gently press any moisture remaining on the surface of the skin into the skin to absorb.

Treatment can be continued with a massage cream, cream mask and/or finishing product.

Note: Always store Collagen Hyaluron in a closed package at room temperature; protect from moisture and direct sunlight.

ACTIVE SUBSTANCES

- **Collagen:** Moisturizing, binds moisture; firms the skin
- **Hyaluronic acid:** Intensively moisturizing, binds moisture intensively; plumps up the intercellular tissue; supports skin's natural regeneration process
