JANSSEN COSMETICS

AMPOULES

- **Lifts the facial contours**
- **Makes the complexion more even and look younger**
- **Moisturises**
- **Smoothes**

Home care application

Gently spread the Skin Contour Fluid over the skin after cleansing the skin. To do this, wrap the top of the ampoule in a paper towel before breaking off the top and pouring the contents into the palm of your hand. Then, spread the fluid evenly over the face and neck, and rub it in gently.

For external use only.

Skin Contour Fluid

SKIN-TIGHTENING AMPOULE

JANSSEN COSMETICS has carried out some extensive research into the skin-ageing process. We know that simply treating surface wrinkles is not enough. When we estimate a person's age, the contours of their face are the most important factor, and sagging cheeks make them look older straight away. If the sagging is reduced, the person will automatically appear younger.

Skin Contour Fluid contains elastin-stimulating peptides that visibly lift the facial contours. The peptides have an innovative mechanism of action that target elastin and the elastic tissue in its entirety. In vivo studies show that users are able to see the lifting effect on their facial contours clearly. In addition, the highly active plant extract SORR specifically combats unsightly collections of melanin (brown spots) and patches of redness. SORR has an anti-inflammatory effect and acts as an antioxidant. It therefore protects the three visible colouring agents (chromophores) of the skin (collagen, haemoglobin and melanin), which combine to create flawless skin without uneven patches or pigmentation abnormalities. The effectiveness of Skin Contour Fluid's innovative ingredients has been scientifically proven and makes the power fluid a specialist for firmer, tighter and more radiant skin.

ACTIVE SUBSTANCES

- **ESP***: elastin-stimulating peptides; encourage elastin synthesis in the fibroblasts, strengthen the structure of the connective tissue and lift the facial contours
- **SORR plant extract****: a highly active extract consisting of Siegesbeckia orientalis and Rhabdosia rubescens; has a soothing effect and acts as an antioxidant; promotes a more even and radiant complexion
- **Saccharide Isomerate**: A carbohydrate complex; attaches itself to the keratin in the skin and hydrates the skin very effectively thanks to its excellent water-binding properties
- **Long-chain hyaluronic acid**: Nourishes, moisturises and smooths the skin

* In vivo and in vitro studies with 4% ESP on

- Skin viscoelasticity
- Resistance to slackening
- Cheek shape
- Self-assessment
- Elastin synthesis
- Elastin storage
- The structure of elastin fibres

** In vivo and in vitro studies with 3% SORR on

- The effect on the collagen chromophore
- The effect on the melanin chromophore
- The effect on the haemoglobin chromophore
- Fighting oxidative stress
