PEEL OFF MASKS

- **Clarifies and refines the pore profile**
- **Regulates sebum gland activity, anti-inflammatory**
- **Absorbs surplus lipids to leave the skin velvety and matte**
- **Increases the skin's moisture**
- **Models the facial characteristics**
- **For all skin types which tend to develop blemishes**

Dead Sea Black Mask

PEEL OFF MASK FOR OILY, BLEMISHED SKIN

Dead Sea Black Mask is a peel off mask in the sense of soft modelage. It can be outstandingly integrated into facial and body treatments. The absorbent property of the alginate mask is optimally supported by the addition of active substances obtained from Dead Sea sediment. Those skin profiles which tend to reveal blemishes, increased sebum gland activity and extended pores particularly benefit from its skin-clarifying character. The addition of tea tree oil offers effective protection against further blemishes.

Supplementary active substance concentrates (such as e.g. ampoules) act even more intensively beneath the peel-off mask. All of the active contents effortlessly penetrate down to the deepest layers of the epidermis, where they intensify their effect. This effect is revealed after just one application in the form of regained elasticity and well-moisturized skin. Metabolic exchange as a whole is optimally stimulated thanks to the occlusive effect, whilst waste products and accumulated tissue fluid are transported away faster.

Oily, blemished skin is normalized and left looking radiant and fresh again. Balance is quickly restored to sebum gland activity and the appearance of the skin as a whole is vastly improved.

Application

1st step: Protect the customer's hairline (e.g. with paper tissues).

2nd step: Apply an active substance concentrate corresponding to the skin type onto the areas of skin to be treated and press in gently. Allow to work in for a few minutes.

3rd step: Mix the peel off mask. Quickly mix 30 g powder with approx. 90 ml Ocean Mineral Activator (room temperature) to form a smooth paste.

4th step: Evenly apply the thick mask mixture onto the face and neck or the corresponding areas of the body in upwards strokes using a spatula. Leave out the eyes and mouth (or include them after consulting the customer). Of course, the respiratory tracts always remain free. Allow the mask to work in for 15 - 20 minutes.

5th step: Simply peel the mask off and remove residues with moist mask sponges if necessary.

6th step: Then apply the appropriate care cream.

Note: when the mask hardens, powders residues may occur on the skin in areas in which the mask runs out. To avoid this, simply apply a little care cream along the edges of the mask at the transition to the neck, the hairline and the nostrils.

ACTIVE SUBSTANCES

- **Alginate:** Lends the powder mask an elastic, firm consistency after mixing and drying on (peel-off soft modelage), moisturizing, firming, lifting
- **Marine mud and salt obtained from the Dead Sea:** Rich in minerals and trace elements (zinc, magnesium, copper), fortifies and revitalizes the skin metabolism, calming, skin-clarifying and moisturizing
- **Tea tree oil:** Has an antibacterial and anti-inflammatory effect
- **Lemon oil:** Antibacterial, refreshing and harmonizing
