ALL SKIN NEEDS

- **Reduces age spots when used regularly**
- **Prevents new age spots from forming**
- **Gives the skin a fresher and more even complexion**
- **Provides moisturisation**
- **Reduces wrinkles caused by dryness**
- **Smooths the microrelief of skin**

Dark Spot Perfector

A SERUM THAT SPECIFICALLY BRIGHTENS AGE SPOTS

Age spots are spots of discoloured skin caused by excessive deposits of the pigments melanin and lipofuscin. They are more common in areas that are exposed to particularly large amounts of sunlight. Irregular pigmentation can make skin look years older than it really is, and many women therefore feel less attractive because of pigmentation marks on the backs of their hands, their face and the area above their neckline.

Dark Spot Perfector has been developed to decrease these unwanted marks. The serum also supplies intensive moisturisation, minimises wrinkles caused by dryness and prevents premature skin ageing.

Dark Spot Perfector contains an active-ingredient complex made from garden cress and soya that reduces the intensity of existing age spots and also prevents new ones from forming. The unique thing about the complex is that it targets age spots specifically without brightening the normal skin around them. This means that, unlike traditional age spot products, Dark Spot Perfector can be applied generously to the backs of the hands, décolleté or face to achieve its nourishing effect. Combined with long-chain and short-chain hyaluronic acid, a carbohydrate complex with properties identical to those of human skin moisturises the skin generously and leaves it noticeably smoother. At the same time, vitamin E acetate is converted into free vitamin E in the skin and combats free radicals.

If it is used regularly, Dark Spot Perfector can brighten age spots in a gentle, skin-friendly manner and prevent new ones from developing.

Home care application

Apply Dark Spot Perfector to your face in the mornings and evenings after washing the skin. Rub it in gently. Afterwards, apply your usual day or night care product and spread it over the skin.

Tip: In the mornings, put Face Guard Advanced on on top of the Dark Spot Perfector, wait a few moments for your skin to absorb the Face Guard Advanced and then apply your usual day care cream.

Results of a scientific study:

*Age Spot Corrector

Proof obtained from a clinical study:

With an Age Spot Corrector application concentration of 4%, the difference in colour between age spots and the surrounding, normal skin decreased by approx. 50% after just two months of regular application.

The study also showed that the product can target and lighten age spots specifically. After eight weeks, the spots were about 30% lighter, but the surrounding skin had not been affected the same way.

ACTIVE SUBSTANCES

- **Age Spot Corrector***: An active-ingredient complex made from garden cress and soya (rich in antioxidants and isoflavones) that has been proven to reduce the development of melanin and lipofuscin, and that brightens pigmentation marks without lightening the normal skin around them
- **Saccharide Isomerase**: A carbohydrate complex with properties identical to those of human skin that leaves the skin moisturised for long periods of time
- **Long-chain and short-chain hyaluronic acid**: Nourishes, moisturises and smooths the skin
- **Vitamin E**: Neutralises cell-damaging free radicals and prevents premature photoageing
- **Silk powder**: Leaves the skin feeling better
