FAIR SKIN

- For visibly brighter and more beautiful skin
- Moisturising and hydrating
- Reduces wrinkles
- Soft, smooth feel on the skin

Home care application

Apply daily in the evening following cleansing and Melafadin Fluid to the face, neck and décolleté and gently massage in. Avoid area around eyes.

Brightening Night Care

SKIN BRIGHTENING NIGHT CARE

Brightening Night Care is a skin brightening and moisturising night care for a flawless, even complexion. The pleasantly light formula perfectly complements the Brightening Day Protection and ensures that skin is also continuously supplied with effective skin brightening active ingredients during the night. At the same time, it supports the skin's nightly regeneration.

Brightening Night Care contains hexylresorcinol, a highly effective skin brightener with anti-ageing properties. Clinical studies have shown its strong performance in relation to the skin brightening effect and an improvement in the evenness of skin tone. The anti-ageing benefits are attributed to the collagen and elastin-stimulating activity of the active ingredients. In addition to hexylresorcinol, an effect enhancer made from walteria indica extract, bioactive fruit acids and a complexing agent is used. The synergistic complex inhibits the activity of tyrosinase, binds copper ion, which is important for melanin synthesis, and also supports the natural exfoliation of the skin. This gentle peeling encourages the removal of dead skin cells with a high melanin content, whilst new cells with a lower melanin content are able to reach the surface of the skin. Short and long chain hyaluronic acids contribute an extra dose of moisture and reduce wrinkles overnight.

The result: With regular use (at least 8 weeks), gentle brightening of the skin tone can be achieved. At the same time, wrinkles are reduced.

ACTIVE SUBSTANCES

- **Hexylresorcinol:** The highly effective active ingredient is a powerful tyrosinase inhibitor which has been proven to brighten skin by 37% within 8 weeks. In addition, hexylresorcinol exhibits clinically proven anti-ageing effects (significant improvement to unevenness, radiance and fine wrinkles)
- **Effect enhancer made from walteria indica extract, bioactive fruit acids and complexing agent:** Waltheria indica extract inhibits the tyrosinase, and the complexing agent binds the copper ion necessary for the synthesis of melanin. Fruit acids support the absorption of the plant extract through gentle peeling, thereby improving effectiveness. Clinical studies show significant brightening of the skin after 8 weeks of use
- **Short and long chain: Hyaluronic acid:** Intensively moisturising and hydrating
- **Saccharide isomerate:** Moisturising substance derived from natural sugars; is firmly bonded to the skin keratin and results in optimal moisture penetration of the skin due to its very good water binding capacity
- **Isostearyl isostearate:** ISIS for short, emollient made from regenerative plant raw materials, improves the cohesion of lipids in the stratum corneum and reduces the skin's transepidermal water loss
